Yelp Redesign

1. Included pictures that are more asthetically pleasing when you open the app
2. 'Make Reservation' Button at the top and on the main screen for easy access
3. Added events to menu bar as most individuals don't know there is an events feautre

1. Added 'Recents' Button here as that would be most helpful to users
   1a. Would prefer to get rid of buttons as when any of these button are pressed, you still have to search for the restaurant as if you were searching from the home screen. Would save time to search from home screen than to use these buttons.

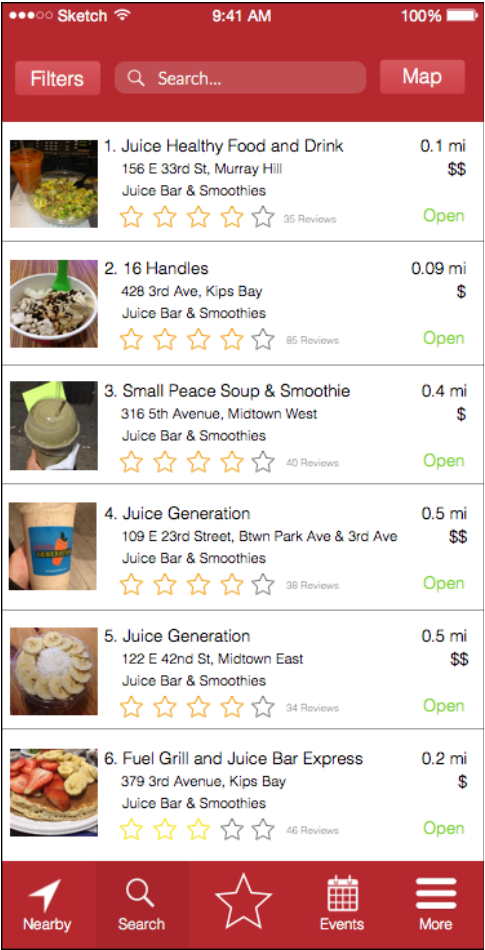

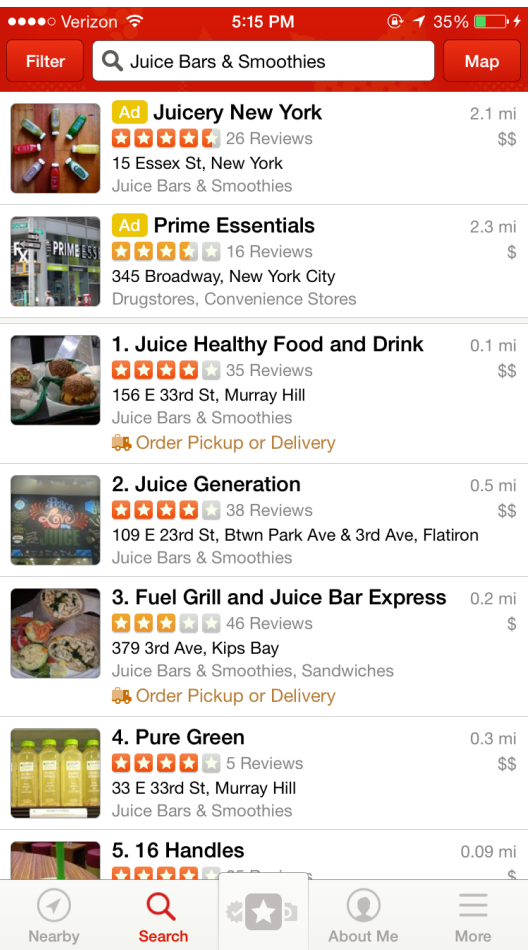

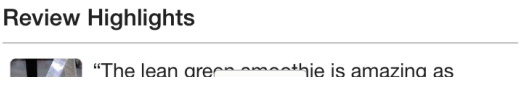

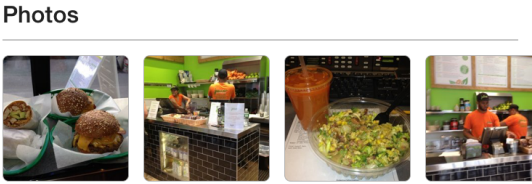

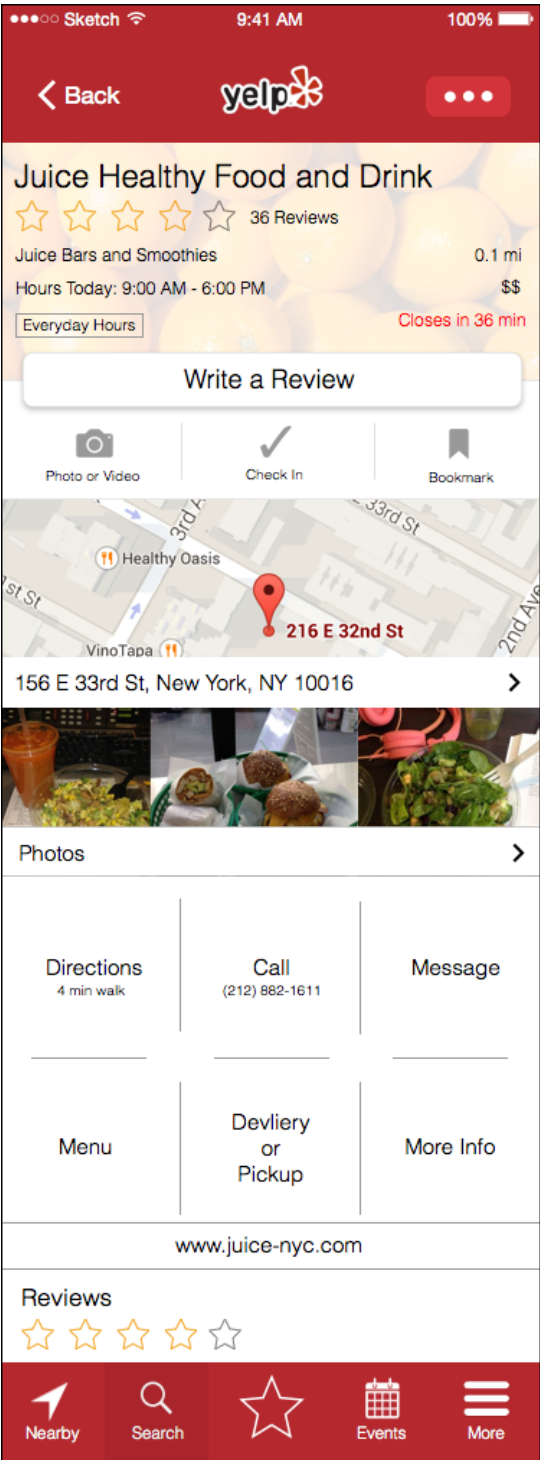

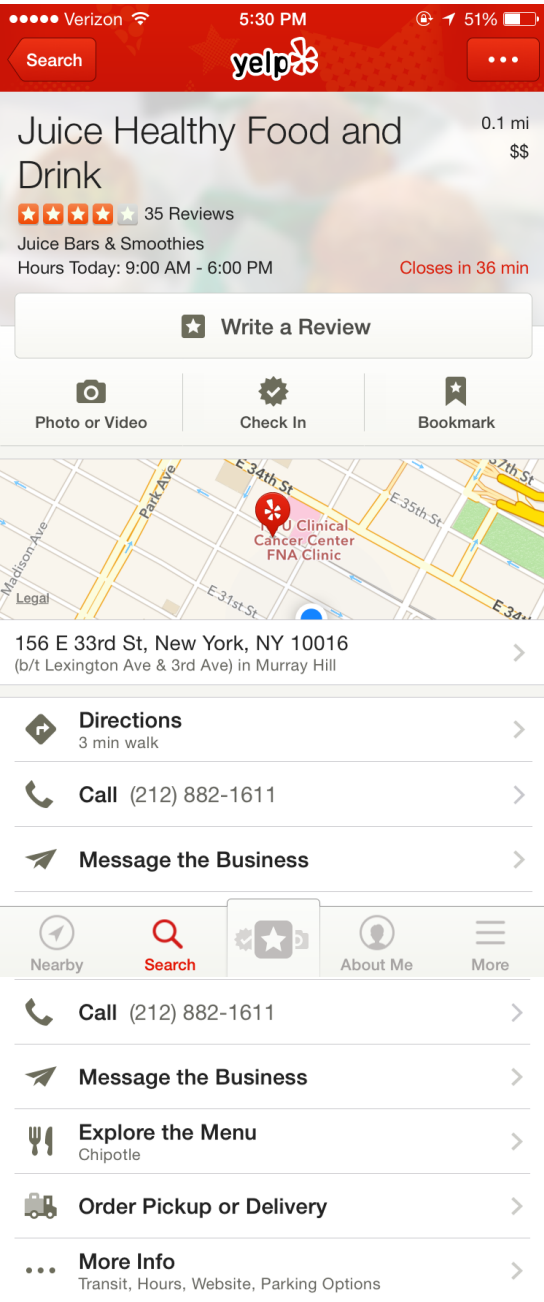

1. Position Rating Stars at the bottom to keep text together
2. Added 'Open' or 'Closed' so user would know right away what their available options are
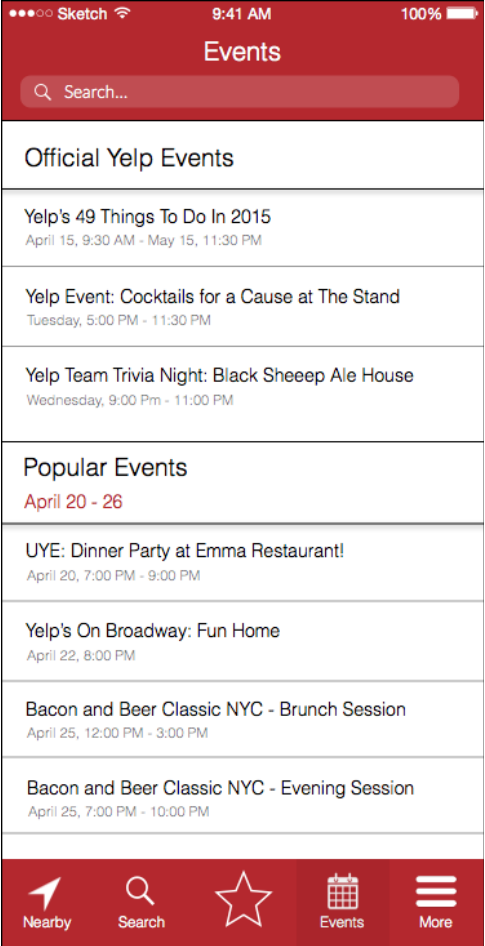

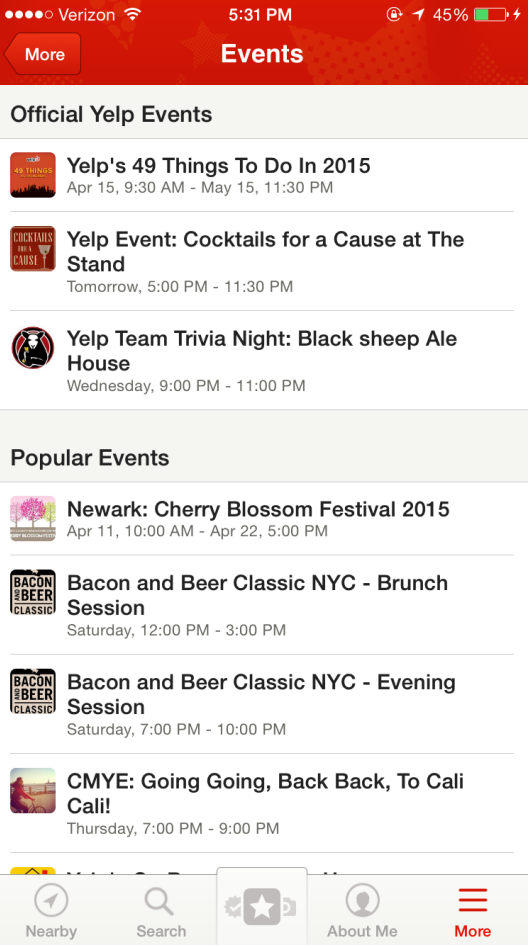

1. As stated above, Added events to the main menu for easier access
2. Added a date range under popular events as before they were not in order

1. Moved photos up as that is one of the main reasons they are on the app.
2. Changed buttons from a list to a grid. They are easier to press and read for the older users.
3. Included the website on the main page for easy access.
